PET STOP

Safer by design. Greater peace of mind.™

The Best Fence You'll Never See.®

Introduction – Hidden Dog Fence

Congratulations on your purchase of the **Pet Stop®** Hidden Underground Dog Fence System. You will find with proper training, both you and your pet will enjoy the system for years to come.

The Pet Stop Pet Fence System is the most technologically advanced system on the market today. Unlike other systems, we designed Pet Stop from your pet's point of view. From the development of our exclusive Comfort Contacts® probes to our SafetyStop® shut off feature, your pet's well-being is always our first priority.

Your Pet Stop System comes complete with advanced safety features and one of the strongest warranties available. Your transmitter is backed by a full lifetime warranty which includes any damage caused by lightning. Your pet's receiver collar is completely covered by a lifetime manufacturer's warranty.

For the best results, please read this manual and all accompanying information in its entirety. If you have any questions, please contact Mike and Adam Sinteff at Pet Stop of North Georgia approved Atlanta Dealers.

Training Your Dog

Your Dog's Personality in Hidden Dog Fences

Your Dog's reaction to the training session varies in accordance to its personality. In most instances, your pet will react in one of two ways:

1. Some Dogs have a great and immediate respect for the boundary. Particularly timid pets stay close to the foundation of your home until they understand where the safety zones are. If this occurs, coax your pet into the safety zone and spend 10 to 15 minutes playing there. By consistently walking your pet around the safety zone, your pet's confidence level will increase. If your Dog remains overly timid, reduce your pet's approaches to the boundary every other day.
2. On the other hand, some pets may show little or no reaction when experiencing the correction. If this should occur, check the following:
 - a. *Are the contact probes making contact with the dog's skin?* Make sure the collar is tight enough around the dog's neck.

If your dog has a thick or long coat, it may be necessary to install a set of spring loaded probe set. Mike and Adam Sinteff your Pet Stop dealer for help.

- b. *Is the battery inserted correctly in the receiver?* Be sure the battery is inserted positive (+) end up.

If your pet still shows little reaction, give us a call at 404-536-6770 for adjustments or additional training.

Walking Your Dog Off Property

After two weeks you can take your dog off the property by taking the Pet Stop Collar off and put on the Dog's leash. Say, "Max let's walk", and walk straight down the drive way and off the property. It is just that easy.

Dog Training Tips

Now that your Pet Stop System has been installed and is operational, it is time to train your pet to the system. As explained to you at the time you purchased the system, this product is designed to be used only as a tool to train your pet to stay within the confines of a given boundary. The success for your pet relies upon the training given. Consistency is important and remember to keep the training fun for your dog. Set aside ten minutes twice a day for training and play with your dog often in the yard. At the time of installation, Mike and Adam provided an initial training session, and explained to you the procedures to ensure your pet will remain safely behind the chosen boundary. The information contained in this manual will further aid you in training your dog in his underground dog fence. It is designed so that your pet is thoroughly trained to the system at the program's end.

Precaution:

Taking shortcuts or rushing the program and not following the guidelines provided, may yield unsatisfactory results for both you and your Dog. We do not recommend just throwing your dog out there to see if he will stay in the yard after a shock or two. Pet Stop of North Georgia, LLC takes a Gentle Step Approach to Electronic Dog Fence Containment.

Warning:

The Pet Stop System should be used only with proper training of your pet. It is not intended as a fool-proof means, such as a solid boundary, of keeping your pet in the yard.

Boundary Training is the most important part of your system. Therefore, it is the sole responsibility of the pet owner to provide training, either personally or through an authorized Pet Stop dealer. Reinforcement of training may be necessary. We guarantee your Dog's Containment; give us a call at the very first sign your dog is not contained.

Note: If you have reasons to believe that your Dog may cause harm to itself or others, you should not rely solely on this system for restraint. Neither Pet Stop nor Perimeter Technologies, Inc. shall be held liable for any damages sustained as a result of your pet crossing the boundary.

Preparing Your Dog For Hidden Dog Fence Training

Your pet should be of sufficient maturity to understand basic training commands and be comfortable walking on a leash before you begin training. Most pet owners find this to be somewhere around 10-12 weeks of age, depending on the breed and personality of the dog.

If you are training more than one pet, do so separately. Each deserves the benefit of your full attention.

Precautions

- **DO NOT** use this system for guard dogs or vicious animals. If you believe your dog may pose a threat to others, **DO NOT USE THIS SYSTEM.**
- **DO NOT** use this system as a solid barrier. This product is a deterrent, meant to train pets to remain within an established boundary. It will not work without proper training.
- **DO NOT** permit children to operate the system.
- If you are unsure as to whether or not your dog will be suitable on a Pet Stop System, please speak with your authorized Pet Stop dealer.

.....
Additionally, your system will not work unless you:

- Adjust the collar snug enough for the contact probes to make contact with your pet's skin, but not so tight that it will cause injury.
- Replace the receiver battery as required about every 9-12 months.

- Contact Mike and Adam with Pet Stop (404)536-6770 immediately if the boundary wire is cut or damaged in any way, so they can help you fix the break as soon as possible.

.....
Avoiding Neck Irritations and Hot Spots from your Dog's Collar
.....

To avoid neck irritation, always remove the receiver collar from your Dog at the end of the day when your pet is inside. Check your pet's neck frequently for any irritation.

Caution: Changes or modifications to any component, not expressly approved by Perimeter Technologies, Inc. could void the user's authority to operate this equipment.

How Our System Works

Mike and Adam Sinteff with Pet Stop of North Georgia, LLC has just installed your new Pet Stop Underground Dog Fence System. Here is a review of how it works:

A 14-16 gauge wire with a 45-50 mil commercial quality jacket and a lifetime warranty, approved for underground burial, is buried 5-6 inches beneath the surface of your yard (indicated by the dotted line in illustration above). This wire is connected to a small control unit called a transmitter, which sends a digitally modulated DM™ radio signal through the buried wire.

Your Dog wears a special computerized Electronic Dog Receiver Collar. If your pet gets too close to the wire, the collar beeps and administers a brief correction. In just a short time, your Dog learns to respect the new established boundaries.

As you'll discover, the Pet Stop system is designed to give your pet freedom to run and play in the yard while keeping him out of harm's way.

Please read this Owner's Manual in its entirety to learn more about the transmitter and receiver collar and their features and benefits. If you have any questions about your new Pet Stop system, please contact Mike and Adam your authorized dealer. Give us a call with any question please!

All Pet Stop® Receivers

Eco-Lite and UltraElite Receiver®

The lightweight Pet Stop UltraElite receiver is equipped with a Flash Alert® low battery light. This indicator will flash red for several days before the battery expires or recharging your Eco-Lite every 4-6 weeks. **Order a new Pet Stop 6, 7.5 or 12 volt Battery on line at www.atlantapetstopdogfence.com**

Comfort Contacts® Soft Tip Probes

Our Comfort Contacts probes are an important part of the Pet Stop system. In order for your dog to feel a correction the soft rubber probes need to make contact with the dog's skin.

Adam or Mike will demonstrate how to properly place the receiver collar on your dog.

Battery Cover

Remove this cover using a flat-ended screwdriver or coin to replace the battery.

The Receivers

Attaching The Receiver

Attaching the UltraElite or UltraMax receiver to your collar is easy!

1. Place the collar holes over the receiver inserts. Be sure the
2. receiver case is on the outside of the collar.
3. Install the plastic washers with the flat side toward the probes.
4. Attach the probes by screwing them snugly (preferably by hand) into the receiver inserts.

Be careful not to over-tighten the probes. Over-tightening can cause damage to the receiver case.

the probes and receiver case.

If you wish to attach the receiver to a collar other than the one provided by your Pet Stop dealer, you must create two holes for the receiver inserts, washers, and probes. Be sure the holes are correctly sized to fit properly. After doing so, follow the above steps to attach the receiver to the collar.

Adjusting the Underground Dog Fence Receiver Collar

It is important that the probes sufficiently make contact with the dog's skin. One finger should fit between the dog's neck and a probe. Your Pet Stop dealer will demonstrate proper collar snugness. Be sure to check the collar every few days for proper snugness. Your dog will not feel a correction if the collar is too loose, and may escape from the yard. Always remove the receiver collar at the end each day.

Battery Replacement

To replace the battery, remove the battery cover with any flat-head screwdriver or coin. Remove the old battery and discard it. Insert the new battery with the positive (+) end UP toward the battery cover. If you are uncertain which side of the battery is the positive side, look closely at the flat side of the battery. You will see a plus (+) mark indicating the positive end.

Battery Maintenance

Battery maintenance is convenient and easy. Your Pet Stop dealer can offer you a battery subscription plan which will make the timing of battery replacement hassle

free. With this plan, you will receive a battery in the mail when it is time to replace it. Ask your Pet Stop dealer for details.

The Transmitter OT-200 & OT-300

Your transmitter comes complete with these standard features:

Built-in Lightning Protection with Zapp Alert® Warning

Traditionally, lightning is one of the most common causes of transmitter failure. Pet Stop has developed built-in surge and over-voltage protection for both the electrical outlet and any high voltage carried by the buried wire in your yard.

Pet Stop of North Georgia, LLC also includes an in boundary wire surge protector and a traditional grounding rod unless the unit is plugged into a GFI. We warranty all Pet Stop components in case they are damaged.

To add extra protection for you and your pet, we have added Zapp Alert®, an audio-visual indication feature should lightning damage your unit. If your transmitter experiences an electrical surge, the transmitter will continue to sound two short beeps. If this happens, contact Mike or Adam at Pet Stop of North Georgia, LLC for service immediately (404)536-6770. You can also make a service appointment at www.atlantapetstopdogfence.com If we can help troubleshoot or help you repair your system, we are happy to do so as well as save you the cost of the service call.

Wire Break Warning System

Your transmitter also has a built-in sensor which monitors the boundary wire. If, for any reason, the wire becomes broken, the transmitter display will flash and a continuous single beep will alert you to the problem. Unplug the transmitter and contact your local Pet Stop dealer to assist you in locating and repairing the wire break correctly.

Fully Adjustable Signal Field

Your transmitter is also completely adjustable. Press the up and down buttons/arrows located on the front of the transmitter to adjust the signal field for your specific installation. Press the UP button to increase the signal field width or press the DOWN button to decrease the signal field width. The digital display has a range from 01 to 32. For example, if your range is set to 16 this indicates there is 8 feet of signal field on either side of the boundary wire for a total of 16 feet.

Your Pet Stop dealer has set the signal field range appropriate for your installation. Before adjusting the signal field width contact your dealer.

We recommend that your dog be on a leash or carefully supervised if the transmitter is not functioning.

Turning the Transmitter On and Off

If you are going to be away for extended period of time and want to turn off the transmitter, press the two black buttons simultaneously. To turn the transmitter back on, press the top button. It is not necessary to reset the transmitter. Remember, when the transmitter is turned off, the Pet Stop receiver collar will not activate.

The Receivers

A. AC Adapter

The AC adapter supplies the power and plugs into your In-Line Surge Protector which plugs into your electrical outlet.

B. Signal Field Adjustment

The signal field width is adjusted by pressing the UP or DOWN buttons. Before adjusting the signal width on the OT-300 give Mike or Adam Sinteff a call at (404)536-6770

See page 5 for complete description.

C. Digital Display

This display indicates the power level and will blink if the boundary wire loop is broken or a power surge has occurred.

D. Boundary Loop Connections

This is where the “loop” or boundary wire is connected.

E. Ground Wire

A Ground Wire is also connected to the electrical outlet or in the case of Pet Stop of North Georgia, LLC a traditional grounding rod is installed

The Receivers

Pet Stop® UltraElite Receiver® and UltraMax Receiver®

The Pet Stop receivers provide safety and convenience for both you and your dog. Both the UltraElite and UltraMax receiver features allow your pet to go anywhere within the boundary you determine, without worrying about your pet experiencing an unintentional correction due to Radio Frequency (RF) interference generated by electrical appliances. Pet Stop modulates a DM™ Signal which insures 100% accurate activations and prevents 100% of false activation; you dog is safe and comfortable in his Pet Stop Brand Underground Dog Fence.

All Receivers are Bi-Functioning - To accomplish this, Pet Stop uses a microprocessor (small computer) in the receiver which analyzes all

incoming signals. When a signal is detected, the microprocessor analyzes it in a matter of milliseconds and determines whether it is the Pet Stop signal or a random RF noise. If the signal detected is the Pet Stop signal, the receiver first emits an audible warning tone (smart zone) and then administers a correction (fail safe zone) to remind your dog of its boundaries. If the signal is not the Pet Stop signal, the receiver disregards it. **This signal processing eliminates false alarms which could confuse your pet and make training difficult. Pet Stop Brand uses state of the art technology to guarantee your dog will be safely contained.**

Mike and Adam has set the receiver to the appropriate correction setting for your dog(s). It is not necessary to change the receiver setting unless, perhaps your dog's environment and distractions change from its initial training. Contact your Pet Stop dealer if you have questions about your dog's receiver settings.

Flash Alert® Low Battery Light

A dead battery in the receiver is one of the primary reasons a pet might escape the yard. The Pet Stop Flash Alert Low Battery Light alerts you when the battery is nearly depleted. The low battery indicator light will flash red for several days before the battery needs to be changed.

Safety Stop® Shut Off

The Pet Stop Safety Stop is a microprocessor-controlled timing circuit which minimizes the period of time during which your pet can receive a correction. This feature is extremely important if your pet happens to get caught within the signal field. Unlike other systems which continue to pulse or correct up to one hour, the Pet Stop Safety Stop will shut off the correction after 20 seconds.

TriScann® Omni-Directional Antenna

The Pet Stop TriScann antenna ensures that the receiver always detects the radio signal, no matter what position the receiver is in. However when your dog moves or turns, the receiver will always be ready to remind your dog of the boundary.

To avoid neck irritation, always remove the receiver collar from your pet's neck at the end of the day when your pet is inside. Check your dog's neck frequently for any irritation.

Troubleshooting

Transmitter

Problem: No digital display reading on the transmitter.

1. Make sure the transmitter has not been turned off. Press the UP button once or twice to turn the power on.
2. Check the AC electrical outlet to be certain it is plugged in and supplying power to the transmitter.

We recommend that you plug in something else, like a hair dryer or radio to be sure the outlet is operating properly. Also, if the transmitter is plugged into a GFI outlet, make sure it is reset and functioning properly.

Problem: The Transmitter is beeping and the display is flashing on and off

1. Make certain that each boundary wire is connected properly to the terminal connections on the transmitter and wires are not pulled out of the Surge Protector.
2. Make certain that the boundary wire in the yard has not been damaged. You can check this quickly by placing a jumper wire across the loop connections on the transmitter. If the transmitter acts normal when the jumper wire is across the loop connections there is a break in the boundary wire. You can try to locate the break visually, or contact Mike and Adam approved Pet Stop dealers in North Georgia and the Greater Atlanta area for repair.

Receiver

Problem: The Receiver is not detecting the signal from the boundary wire.

1. Make certain that the transmitter is turned on and transmitting a digitally modulated signal. Make sure that the receiver battery has been recently replaced and was inserted properly.

Problem: Dog is not responding to the correction.

2. *Check the fit and snugness of the pet's receiver collar. Make certain that the soft probes are making contact with the dog's skin.*

1. Make sure that the receiver battery has been recently replaced and was inserted properly.

Problem: Low battery indicator on the receiver is flashing.

1. When the Low Battery Indicator is flashing it means you need to replace the battery.
 - a. The warranty is limited to the original purchaser of the unit at retail. When requesting warranty service, proof of purchase may be required. A copy of the warranty registration or sales receipt may be used.
 - b. The unit must be shipped, freight prepaid, or delivered to an authorized Dealer of PERIMETER TECHNOLOGIES, INC. to render the service provided herein. Dealers may charge a service fee to render on-site service over and above any applicable charges.
 - c. The unit must not have been previously altered, repaired or serviced by anyone other than a service facility authorized by PERIMETER TECHNOLOGIES, INC. The unit must not have been subject to accident, misuse, abuse, or operated contrary to the instructions provided herein. Warranty does not include lost or stolen equipment.

EXCEPT TO THE EXTENT PROHIBITED BY APPLICABLE LAW, NO OTHER WARRANTIES, WHETHER EXPRESSED OR IMPLIED, OTHER THAN THOSE PROVIDED IN WRITING HEREIN, SHALL APPLY TO THIS UNIT, PERIMETER TECHNOLOGIES, INC. SHALL NOT BE LIABLE FOR ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE FOR ANY PERIOD IN EXCESS FOR THE PERIODS OF EXPRESS WARRANTIES PROVIDED ABOVE. IN ADDITION, UNDER NO CIRCUMSTANCES, SHALL PERIMETER TECHNOLOGIES, INC. BE LIABLE FOR PROPERTY DAMAGE, ECONOMIC LOSS, OR ANY CONSEQUENTIAL DAMAGES SUSTAINED IN CONNECTION WITH SAID UNIT. SOME STATES

DO NOT ALLOW LIMITATION ON HOW LONG AN IMPLIED WARRANTY LASTS, OR DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATIONS OR EXCLUSIONS MAY NOT APPLY TO YOU.

PERIMETER TECHNOLOGIES, INC. NEITHER ASSUMES NOR AUTHORIZES ANY REPRESENTATIVE OR OTHER PERSON TO ASSUME FOR IT ANY OBLIGATION OR LIABILITY OTHER THAN SUCH AS IS EXPRESSLY SET FORTH HEREIN. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE.
